1. Equipment Introduction

This chapter mainly introduces functions and structures of DWG2000D-32G.

1.1 Introduction

DWG2000D-32G is full functions VoIP gateway based on IP and GSM network, which provides a flexible network configuration, powerful features, and good voice quality. It works for carrier grade, enterprise, residential users for cost-effective solution.

1.2 Applications Scenario

DWG2000D-32G implements smooth transition between PLMN (GSM) and VoIP network.

With the development of users and telecom service, mobile network and fixed network integration will be steadily increasing. DWG2000D-32G provides high quality VoIP service which perfectly meets the requirement. A typical application scenario shown as figure 1-2-1

1.3 Product Appearance

The appearance of DWG2000D-32G shows as follow

Figure 1-3-1 Front view of DWG2000D-32G

Table 1-3-1 Description of Front view

| Index | Sign | Description |
|-------|---------------|---|
| 1 | ANT Interface | Standard antenna interface |
| 2 | ANT indicator | Indicator of SIM card, status: register, unregister |
| 3 | LAN | 10/100M Base-TX, RJ-45 |
| 4 | Console | Serial port, it is a serial communication physical interface with RS232 |
| 5 | RST | Keep press for 7 seconds to restore the factory setting |
| 6 | Run | Indicate the status of the device. |
| 7 | Power | Indicate the status of the power connection |

Figure 1-3-2 Rear view of DWG2000D-32G

1.4 Functions and Features

1.4.1 Protocol Standard Supported

- Standard SIP and MGCP(option) protocol;
- Simple Traversal of UDP over NATs (STUN);
- Point-to-point protocol over Ethernet (PPPoE);
- Hypertext Transfer Protocol (HTTP);
- Dynamic Host Configuration Protocol (DHCP);
- Domain Name System (DNS);
- ITU-T G.711α-Law/μ-Law、G.723.1、G.729AB;
- VLAN and VPN

1.4.2 System Function

- PLC: Packet loss concealment
- VAD: Voice activity detection
- CNG: Comfort Noise Generation
- Local/Remote SIM card work mode
- Adjustable gain of port
- DTMF adjustment
- Balance alarm
- Lock/unlock SIM/UIM
- Mobile number display rejection
- Sending/receiving SMS
- Customize IVR Recording
- White and black list
- One number access
- Open API for SMS, support USSD
- Echo Cancellation (with ITU-T G.168/165 standard)
- Automatic negotiate network
- Hotline
- BCCH

1.4.3 Industrial Standards Supported

- Stationary use environment: EN 300 019: Class 3.1
- Storage environment: EN 300 019: Class 1.2
- Transportation environment: EN 300 019: Class 2.3
- Acoustic noise: EN 300 753
- CE EMC directive 2004/108/EC
- EN55022: 2006+A1:2007
- EN61000-3-2: 2006,
- EN61000-3-3: 1995+A1: 2001+A2: 2005
- EN55024: 1998+A1: 2001+A2: 2003
- Certifications: FCC, CE

1.4.4 General Hardware Specification

- Power Supply: 220VAC
- Temperature: 0~40 °C (Operation), -20~80 °C (storage)
- Humidity: 5%~90%RH
- Power Consumption: 80W
- Dimensions: 440(W) x330 (D) x66 (H) mm
- Net weight: 6.4 kg

2. Equipment Quickly Installation

This chapter mainly introduces DWG2000D-32G hardware installation and connection of equipment.

2.1 Installation Notice

DWG2000D-32G provides standard RJ45 with 10Mbps or 100Mbps interfaces.

For Wireless part, make sure antennas connecting well on device. Inserting SIM cards and GSM channels should work properly.

2.2 Installation Procedure

2.2.1 Install SIM Card

When installing SIM card, loosen the screws on the front panel of device. Procedure shows as below:

- Loosen screw, draw out the user board
- Inset the SIM card to the SIM slot of the back of the user board
- The user board inserted into the device
- Tighten the screws

Figure 2-2-1 SIM card Installation (1)

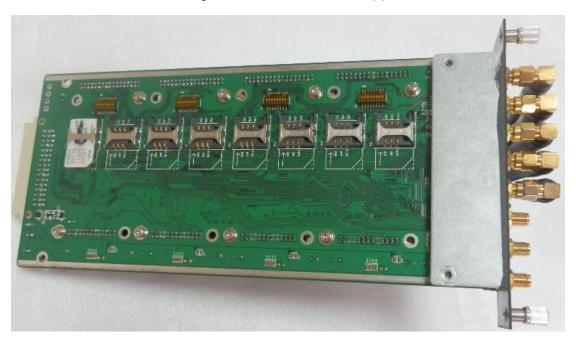

Figure 2-2-2 SIM card Installation (2)

3. Network Configuration

In this chapter we will introduce the initial configuration of DWG2000D-32G. All of the network parameters of the gateway can be configured by IVR guidance.

3.1 Attentions

In each step, if user hears an IVR message of "setting successful", which means that user has finished this step successfully. However, if user hears a "setting failed" message, please re-do that step again.

3.2 General Feature Codes for System Setting

| | Table 5-5-11 eature codes for system setting |
|---------------|--|
| Feature codes | Description |
| *114# | Play SIP user ID |
| *150*a# | Set IP address(static/DHCP), a can be digit 1 or 2,*150*1# is static IP address |
| *152*a*b*c*d# | Configure IP address, a, b, c, d are the four fields of IP address. |
| *153*a*b*c*d# | Configure subnet mask. a, b, c, d are the four fields of the subnet mask |
| *156*a*b*c*d# | Configure the device gateway, a, b, c, d are the four fields of the device gateway |
| *158# | Report LAN port IP address |
| *159# | Report WAN port IP address |
| *457 | Setting the work mode (route or bridge), * 157 * 0 # is route mode, * 157 * 1 # is |
| *157 | bridge mode |

| Table 3-3-1 | Feature | codes | for | system | setting |
|-------------|---------|-------|-----|--------|---------|
|-------------|---------|-------|-----|--------|---------|

| *195# | Play record |
|-------|---|
| *198# | Clear record |
| *199# | Setting Record. dial*199# start record(≤ 20s), then press # end the recording |
| *111# | Restart device |

3.3 Static IP Configuration

This is an optional configuration step. In case of user forgot the IP address or the device can't obtain IP address from local network properly, IVR guideline may help to fix it.

Assume that DWG2000D-32G IP address to be 172.16.80.89, subnet mask is 255.255.0.0, default

gateway is 172.16.1.1, configure it through IVR as following steps:

- 1) Please make sure SIM card installed well and registered
- Dial the phone number of the SIM card. Press "*150*1#" after heard "dial the extension number ".
 Hang up after heard "setting successful" prompt.
- 3) Dial the phone number of the SIM card. Dial "* 152 * 172 * 16 * 80 * 89 #"after heard "dial the extension number ". Hang up after heard "setting successful".
- Dial the phone number of the SIM card. Dial "*153*255*255*0*0#" after heard "dial the extension number ". Hang up after heard "setting successful"
- 5) Dial the phone number of the SIM card. Dial "*156*172*16*1*1#" after heard "dial extension number
 ". Hang up after heard "setting successful"
- 6) Dial the phone number of the SIM card. Dial "*111#" after heard "dial extension number ", that will restart the device
- 7) Dial the phone number of the SIM card. Dial "*158#" after heard "dial extension number ". It will play report the IP address of LAN port.

3.4 DHCP Configuration

DHCP mode configure as follows:

- 1) Please make sure hardware installation have finished
- Dial the phone number of the SIM card. Dial "*150*2#" after heard "dial extension number ". That means the DHCP is configured successfully
- Restart the device, wait for 30 seconds, and then dial the SIM card telephone number, enter "*158
 #" to query the IP address

Note: If reporting the IP address is 0.0.0.0, which means that the gateway could not obtain a IP address successfully. Please check:

1) Make sure the device have been connected to the network

2) Make sure the DHCP Server is working. If there is no DHCP Server, please set the IP of device to static IP

3) Restart the gateway and try again

4. WEB Configuration

This charpter describes web configuration of DWG2000D-32G.

4.1 Access the System through HTTP

The default IP of LAN port is 192.168.11.1, before web access, make sure the PC is able to ping continuously.

Here the device's IP address is 172.16.80.89, after input this IP, the GUI shows as below:

| | 30.89:80 requires a username and ver says: GoAhead. |
|------------|--|
| | |
| User Name: | admin |
| Password: | ***** |

Enter username and password and then click "OK" in configuration interface. The default username and password are "admin/admin". We are strongly recommend to change the default password for security purpose.

4.2 WEB Configuration

DWG2000D-32G WEB configuration interface consists of the navigation tree and the detail configuration interfaces.

Table 4-3-2 Description of mobile information

| Port | GSM channel number, it is range from 0 to 31 |
|----------------|---|
| Туре | Indicates the current type of network. Such as CDMA or GSM |
| IMSI | International Mobile Subscriber Identity, it is the uniquely identifies of SIM card |
| Status | Indicates the register status of current GSM module |
| Remaining Call | Limited call duration of SIM card, when call duration is out of that duration, the call |
| Duration | would be disconnected. This option shows remaining talk time. |
| Carrier | Displays the network carrier of current SIM card. |
| Signal Quality | Displays the signal strength of in each channels of GSM |
| BER | Bit error rate, internal parameter |
| ASR | Answer Seizure Ratio is a measure of network quality. Its calculated by taking the |
| | number of successfully answered calls and dividing by the total number of calls |
| | attempted. Since busy signals and other rejections by the called number count as call |
| | failures, the ASR value can vary depending on user behavior. |
| ACD | The Average Call Duration (ACD) is calculated by taking the sum of billable seconds |
| | (billable) of answered calls and dividing it by the number of these answered calls. |

VolPon www.voipon.co.uk sales@voipon.co.uk Tel: +44 (0)1245 808195 Fax: +44 (0)1245 808299

| PDD | Post Dial Delay (PDD) is experienced by the originating customer as the time from the |
|-------------|---|
| | sending of the final dialled digit to the point at which they hear ring tone or other |
| | in-band information. Where the originating network is required to play an |
| | announcement before completing the call then this definition of PDD excludes the |
| | duration of such announcements. |
| Call Status | Show the status of call, its include 3 type of status : |
| | Idle: the GSM channel is free. It is ready to receive the call |
| | Processing: the call is delivering to mobile network |
| | Active: the call is established |

| | Management VLAN DNS | Users can set DHCP or static DNS server IP address |
| | Server | |

4.5.3 ARP

The ARP function mainly used to query and add the map of IP and MAC. There are static or dynamic ARP entries.

Like other routers, the gateway can automatically find the network device on the same segment. But, sometimes you don't want to use this automatic mapping; you'd rather have fixed (static) associations between an IP address and a MAC address. Gateway provides you the ability to add static ARP entries to:

- Protect your network against ARP spoofing
- Prevent network confusion as a result of misconfigured network device

Figure 4-5-4 Add ARP

| Add ARP | |
|-------------|--|
| IP Address | |
| MAC Address | |
| | The IP format is: xxx.xxx.xxx The MAC format is: xx-xx-xx-xx-xx-xx OK Search All |

|-----|--------|--------|--|

| | It is an optional configuration item, and is used to add IP->Tel number change | |
|----------------------|--|--|
| Tel->IP destination | data. | |
| numbers manipulation | The IP->Tel Manipulation defined the rules of add, and deletion of called | |
| | numbers, which are referenced by IP->Tel routing. | |
| Index | It uniquely identifies a route. Its value is assigned globally, ranging from 0 to | |
| Index | 31. | |
| Description | It describes the route for the ease of identification. Its value is character string | |
| | All the caller number must match the source prefix. It specifies the source | |
| | prefix allow to send call out | |
| Source Prefix | Any: include anonymous, 0xxxx, 1[2-9]xxxx etc. | |
| | Oxxxx: consist of some digits such as 015,08,09 | |
| | • 1[3-8]6:consist of some prefix, include 136,146,156,166,176, 186 | |
| Destination Prefix | All the called number must match the destination prefix, the call prefix | |
| Destination Plenx | indicates the connected number | |

Table 4-8-3 Description of Tel->IP destination numbers manipulation

| | Any: include anonymous, 0xxxx, 1[2-9]xxxx etc. | |
|----------------------|--|--|
| | Oxxxx: consist of some digits such as 015,08,09 | |
| | 1[3-8]6:consist of some prefix, include 136,146,156,166,176, 186 | |
| Destination | Its specifies destination Port or Port Group | |
| Stripped Digits from | It specifies the length of the digits to be deleted from left | |
| Left | is specifies the length of the digits to be deleted from left | |
| Stripped Digits from | It specifies the length of the digits to be deleted from right | |
| Right | The specifies the length of the digits to be deleted from right | |
| Prefix to Add | Add the new digits in front of the original number | |
| Suffix to Add | Add the new digits at the end of the original number | |
| Number of Digits to | It specifies the number of Digits to leave from Right | |
| Leave from Right | is specifies the number of Digits to leave from Right | |

Example:

Add an IP->Tel Manipulation, to change the called number from 25478888888 to 078888888

Figure 4-8-6 Tel->IP destination numbers manipulation

| Tel.>IP Destination Numbers Add | | | |
|---|------------|-------|---|
| | | | |

| No Answer Timeout | 55 s |
| Interdigit Timeout | 4 s |
| Call Delay | 0 s |
| | |

Table 4-12-1 Description of Service Configuration

| LOCAL Start RTP PORT | Means the initial port when RTP voice stream transmit in the IP network , in |
|----------------------|---|
| | general, using the factory default values. When there are multiple DINSTAR |
| | series voice products, and the network gateway or router's NAT with |
| | loopholes, user can try changing this item |
| Enable Silence | Enable the "silence suppression" almost no impact on call quality, and can save |
| Suppression | about half of the bandwidth. |
| Call Progress Tone | Each country has its different call progress tone required standards, such as |
| | busy tone, ring back tones and ring tone. |
| Preferred Coders | Means the code format when Voice transfer on IP network, support PCMA, |
| | PCMU, G.723.1 andG.729AB. |
| Enable PSTN Incoming | Means when call from PSTN side, you can dial the function keys for checking |
| Configuration | number, setting IP and so on |
| Enable Auto Outgoing | Means when call out , whether by ordinal or polling pick to Select a Channel, |

| Routing | this feature are generally used when use the same SIP User ID to register |
|-------------------------|--|
| IP to PSTN One Stage | The User ID will be sent directly to PSTN, for example: the user calls 6715, the |
| Dialing | device will sent 6715 User ID to PSTN |
| Play Voice Prompt for | Setting is yes, when through the PSTN calls to the Channel, the device will with |
| PSTN Incoming Calls | the clew tone, the default is "Please dial the extension User ID"; setting to No, |
| 5 | the device will play dial tone |
| DTMF | DWG2001/DWG2004/DWG2000D-32G support RFC2833 and SIGNAL two |
| | ways. DTMF INTERVAL range is 50 ~ 800ms, DTMF VOLUME can use the |
| | default Configuration |
| Nat Traversal | Include Static NAT and STUN, NAT's UDP simple cross |
| STUN | STUN (Simple Traversal of UDP over NATs) is a network protocol. It is allowed |
| | to stay behind the NAT (or multiple NAT) client part to identify their clients' |
| | public address, found himself after what Type of NAT and NAT for a particular |
| | Channel is bound to a local Internet terminal Channel. This information is used |
| | for two host to set up UDP communication behind the same NAT router. The |
| | agreement defined by the RFC 3489 |
| Allow call from IP to | Refer to "SIP Configuration" -> "Is register" . If "Is register" setting is no, this |
| PSTN without | option need set Yes ,to avoid that the devices can not call out |
| Registration | |
| Allow Call from PSTN to | Refer to "SIP Configuration" -> "Is register" . If "Is register" setting is no, this |
| IP without Registration | option need set Yes ,to avoid that the devices can not call in |
| Reject Anonymous call | The incoming anonymous calls will be rejected |
| from IP to PSTN | |
| Use # as End Key | In General, SIP phones are based on # as the end, if this option is set to No, the |
| | dial-up will end expires dial-up time |
| Interdigit Timeout | Bit of between the dialing time ,over the time will be seem as end of dial |

4.12.2 SIP Configuration

Table 4-12-3 Description of Port Configuration

| Port Configuration | Used to configure ports' gain, Auto-Dial, etc. |
|--------------------------------------|--|
| ALL ports register used same user ID | The default is not. If set to "yes" ,all the port will use user ID |
| SIP User ID | It is the account used for registration, equipment port's unique identifier |
| Authenticate ID | Used for authenticate |
| Password | Its register Password |
| Tx Gain | Its DSP's Tx Gain. Adjusting it will effect volume on GSM side. |
| Rx Gain | Its DSP's Tx Gain. Adjusting it will effect volume on IP side. |
| To VoIP Hotline | When PSTN part client calls to this port, gateway will auto forward to the hotline User ID. Leave it blank if you don't need this function. *Note: Please config Tel->IP Operation if you need this function. |
| To PSTN Hotline | When VoIP part client calls to this port, Gateway will auto forward to the number to PSTN part. Leave it blank if you don't need this function. *Note: Please config IP->Tel Operation if you need this function. |

4.13 Digit Map

| git Map | | |
|-----------|---------|--|
| Digit Map | x.T x.# | |
| | | |
| | | |
| | | |
| | | |
| | | |

NOTE: Length of 'Digit Map' should be not more than 119 characters.

Save

Digit Map Syntax:

1. Supported objects

Digit: A digit from "0" to "9".

Timer: The symbol "T" matching a timer expiry.

DTMF: A digit, a timer, or one of the symbols "A", "B", "C", "D", "#", or "*".

2. Range []

One or more DTMF symbols enclosed between square brackets ("[" and "]"), but only one can be selected.

3. Range ()

One or more expressions enclosed between round brackets ("(" and ")"), but only one can be selected.

4. Separator

: Separated expressions or DTMF symbols.

5. Subrange

-: Two digits separated by hyphen ("-") which matches any digit between and including the two. The subrange construct can only be used inside a range construct, i.e., between "[" and "]".

6. Wildcard

x: matches any digit ("0" to "9").

7. Modifiers

.: Match 0 or more times.

8. Modifiers

+: Match 1 or more times.

9. Modifiers

?: Match 0 or 1 times.

Example:

Assume we have the following digit maps:

1. xxxxxxx | x11

and a current dial string of "41". Given the input "1" the current dial

string becomes "411". We have a partial match with "xxxxxx", but a complete match with "x11", and hence we send "411" to the Call Agent.

2. [2-8] xxxxxx | 13xxxxxxxx

Means that first is "2", "3", "4", "5", "6", "7" or "8", followed by 6 digits; or first is 13, followed by 9 digits.

- 3. (13 | 15 | 18)xxxxxxxx Means that first is "13","15" or "18", followed by 8 digits.
- 4. [1-357-9]xx Means that first is "1","2","3" or "5" or "7","8","9", followed by 2 digits.

4.14 Tools

4.14.1 Firmware Upload

Figure 4-14-1 Firmware upload

| Firmware Upload | |
|--------------------|----------------------------------|
| Send "Idf" file fr | rom your computer to the device. |
| Software | Browse Upload |
| Web | Browse Upload |
| Dsp Firmware | Browse Upload |
| | |

NOTE: 1. After uploading, please restart the device to take effect. 2. Please wait 60 seconds after Dsp Firmware upload is successful.

Select the software, Web or DSP firmware program under correct directory services, and then click upload will complete upgrade the firmware. During the upgrade process, please do not swtich off the power supply, equipment may paralyze.

4.14.2 Management Parameter

Figure 4-14-2 Management Parameter

| anagement Parameter | |
|---|-------------------------------------|
| Voice Prompt Language Syslog Parameter | English |
| Syslog Enable | 🔘 Yes 🖲 No |
| NTP Parameter | |
| NTP Enable | ● Yes ◎ No |
| Primary NTP Server Address | us.pool.ntp.org |
| Primary NTP Server Port | 123 |
| Secondary NTP Server Address | 18.145.0.30 |
| Secondary NTP Server Port | 123 |
| Check Interval | 3600 s |
| Time Zone | GMT-6:00 (US Central Time, Chicago) |

| Voice Prompt Language | Select the language of voice prompt. There are two kind of voice : English and Chinese |
|-----------------------|---|
| Syslog Paremeter | Syslog is a standard for network device data logging. It allows separation of the software that generates messages from the system that stores them and the software that reports and analyzes them. It also provides devices which would otherwise be unable to communicate a means to notify administrators of problems or performance. There are 5 grades of syslog, |
| NTP Parameter | Including NONE, DEBUG, NOTICE, WARNING and ERROR. The Network Time Protocol (NTP) is a protocol and software implementation for synchronizing the clocks of computer systems over packet-switched, variable-latency data networks. User need to fill the NTP Server Address and select Time Zone |

Table 4-14-1 Management Parameter

4.14.3 Config Backup

Figure 4-14-3 Config backup

| Data Backup | | | | |
|--|--------|--|--|--|
| Click 'Backup' for download configuration file to your computer. | Backup | | | |
| Click 'Backup' for download configuration file to your computer. | | | | |
| 4.14.4 Data Restore | | | | |

Figure 4-14-4 Data restore

| Data Restore | |
|----------------|-----------------------------------|
| Send data file | from your computer to the device. |
| Configuration | Browse Restore |
| | |

Send data file from your computer to the device

4.14.5 IVR Voice Prompt Upload

By default, when PSTN call incoming, the system will play the default IVR, and also the user can load custom IVR.

Figure 4-14-5 IVR Voice Prompt Upload

| IVR Voice Prompt Upload | | |
|---|----------------------------|--------|
| Send "wav" file from your computer to the de | vice. | |
| IVR Voice Prompt File for PSTN Incoming Calls | Choose File No file chosen | Upload |
| Play IVR Voice Prompt from | Default Custom | Save |
| | | |

NOTE: 1. "wav" file should be not more than 360k bytes. 2. It must restart the device to take effect.

NOTE: the customize voice files can be recorded using Windows recording programs, the sound format is 8000Hz, 16 bit sampling in mono, with WAV format, size of files can not exceed 190KB.

4.14.6 PING test

Ping is utility used to test the reachability of a host on an Internet Protocol (IP) network and to measure the round-trip time for messages sent from the originating host to a destination host.

Figure 4-14-6 Ping Test

| Ping Test | |
|---------------------------------|------------|
| Ping Destination | 172.16.1.1 |
| Number of Ping(1-100) | 4 |
| Ping Packet Size(56-1024 bytes) | 56 |
| | |
| | Start Stop |

| Pinging 17 | 2.16.1.1 with 56 | bytes of da | ita: | |
|------------|--|-------------|------------------|--|
| Reply seq= | 0 from 172.16.1.1 | : bytes=56 | time=20ms TTL=64 | |
| Reply seq= | 1 from 172.16.1.1 | : bytes=56 | time<1ms TTL=64 | |
| Reply seq= | 2 from 172.16.1.1 | : bytes=56 | time=10ms TTL=64 | |
| Reply seq= | 3 from 172.16.1.1 | : bytes=56 | time=10ms TTL=64 | |
| Packets: S | stics for 172.16. ent = 4, Received m = 1ms, Maximum | = 4, Lost | | |

4.14.7 Tracert Test

Trace route is a computer network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an Internet Protocol (IP) network.

Figure 4-14-7 Tracert Test

| Trace | ert Destinatio | www.google.com.hk |
|--------|----------------|---|
| Max | Hops of Trac | ert(1-255) 30 |
| | | Start Stop |
| matio | on | |
| | - | to www.google.com.hk[74.125.71.99] over a maximum of 30 |
| hops | | |
| 1 | 1 ms | 172.16.1.1 |
| 2 3 | * | Request timed out. |
| - | | Request timed out. 121.15.179.86 |
| 5 | | 119.145.47.46 |
| 6 | | 202.97.35.250 |
| 7 | | 202.97.60.142 |
| | | 202.97.60.22 |
| 9 | | 202.97.61.102 |
| - | | 202.97.62.214 |
| | | 209.85.241.58 |
| | | 209.85.253.69 |
| 12 | | 216.239.48.230 |

4.14.8 Login Password

Figure 4-14-8 IVR Voice Prompt Upload

| Username & Password | |
|-------------------------|-------|
| | |
| Web Configuration | |
| Old Web Username | admin |
| Old Web Password | |
| New Web Username | |
| New Web Password | |
| Confirm Web Password | |
| Telnet Configuration | |
| Old Telnet Username | admin |
| Old Telnet Password | |
| New Telnet Username | |
| New Telnet Password | |
| Confirm Telnet Password | |
| | |
| | Save |
| | Save |

When using web or telnet Configuration, please enter default user name and password. User can modify the login name and password.

4.14.9 Factory Reset

Figure 4-14-9 Factory Reset

| Factory Reset | |
|---------------|---|
| | Click this button to reset factory default settings |
| | Apply |

Be careful do this operation, after restore factory setting, all the parameters will be changed to the factory default.

4.14.10 Restart

Figure 4-14-10 Restart

| Restart | |
|--|--|
| Click this button to restart the device. | |
| Restart | |

5. FAQ

5.1 Device has been connected to network physically, but cannot access the gateway

1) Make sure the network cable is ok , can through view the device network port indicator light to determine the physical connection is working or not;

2) Make sure the connected network devices (router, switch or hub) support 10M/100M adaptive, if not, connect the Equipment directly to PC, landing WEB and in the "local connection" Configuration interface Select the correct Ethernet Work Mode;

3) Check the Network Configuration, if the Configuration is incorrect, please re-Configuration. If you are using DHCP mode, check DHCP Server is working properly;

4) Check whether there is a LAN device conflict with the exists IP address.

5.2 Equipment can not register

If the Run LED does not flash mean unregistered

1) Check the network connection is working (see above section), whether the Configuration is correct;

2) Check whether the LAN firewall setting is inappropriate (such whether limit the network communication); If it is, there are two ways to try to resolve;

3) Check whether the Local Network to the SIP PROXY platform network environment is relatively poor or not, and if so, please check Local Network or contact the service provider;

4) if go through those steps, the device still be in trouble, please contact the equipment provider;

5.3 When calling out, the callee's phone shows wrong caller ID:

1) Ask the callee checks whether the device is failure or device battery power is low

2) Make sure the callee has been subscribed called User ID display service

3) If only part of the caller User ID with this problem, please contact the telecom carrier.

5.4 sudden interruption during a call

1) make sure whether is human error caused the problem

2) Check the balance.

3) Make sure whether the LAN equipment such as gateway or router fails, user can try to restart the gateway or router

5.5 voice single-pass, double-barrier or poor quality

1) Make sure the equipment is working properly with grounded power

2) Check the device network connection is in working status

3) Ask network administrators to open limitation with the equipment's network communications (it is a special equipment, not afraid of virus attacks); (2) try to enable the equipment tunnel (through the WEB for Configuration, Also, please NOTE, open the tunnel will impact voice quality, Please do not enable the tunnel as far as possible, refer WEB Configuration Interface Description section)

4) Make sure the LAN equipment is working, user can try to restart the gateway or router to solve the problem

5) Check whether there is more than one DINSTAR series products in LAN network: some gateways or routers, processing network packet is vulnerable (for example, to multiple network devices or the same protocol network communication, NAT allocated the same conversion communications Channel). If there is such a case, suggest replacing a router or specify each voice gateway with different LOCAL RTP PORT Channel (refer to the base WEB Configuration interface section)

6) Check the equipment network environment for the softswitch platform, monitor the network condiation, make sure the network is solid

6. Glossary

GSM: Global System for Mobile Communications

- CDMA: Code Division Multiple Access
- FMC: Fixed Mobile Convergence
- SIP: Session Initiation Protocol
- MGCP: Media Gateway Control Protocol
- DTMF: Dual Tone Multi Frequency
- USSD: Unstructured Supplementary Service Data
- PSTN: Public Switched Telephone Network
- STUN: Simple Traversal of UDP over NAT
- IVR: Interactive Voice Response
- IMSI: International Mobile Subscriber Identification Number
- IMEI: International Mobile Equipment Identity
- DMZ: Demilitarized Zone
