

Servidor de Cache e Firewall com Squid, Dhcp-Server e Firewall na Cubieboard 2 com Cubian

Nesse artigo você aprenderá a instalar e configurar servidor de cache com [squid](#), dhcpd-server e firewall iptables.

Utilizaremos o sistema operacional Cubian para Cubieboard 2.

Material utilizado

Adaptador de rede USB 2.0

[Onde encontrar o adaptador de rede USB 2.0.](#)

Download da Imagem para SD:

<http://dl.cubieboard.org/software/a20-cubieboard/cubian/Cubian-base-r4-arm-a20.img.7z>

Instalação:

```
root@Cubian:~# sudo su
```

```
root@Cubian:~# apt-get install squid
```

```
root@Cubian:~# cd /etc/squid/
```

```
root@Cubian:~# mkdir cache
```

```
root@Cubian:~# chmod 777 cache
```

```
root@Cubian:~# mv squid.conf squid.conf.original
```

```
root@Cubian:~# touch bloqueados
```

```
root@Cubian:~# vim bloqueados

Configuração dos clientes:

Windows

Em um cliente Windows, deverá ser ativada a opção "Obter automaticamente um endereço IP", nas propriedades TCP/IP da interface de rede. Em uma rede caseira, com acesso à Internet via modem ADSL ou cabo, esta opção deverá, a princípio, já estar ativada.
