

Configurando PAP2T com servidor Issabel

Este é mais um tutorial da Lojamundi.

Vamos ensiná-lo a configurar o Ata PAP2T de 2 portas FXS.

Ainda não tem o ata PAP2T da Linksys? Clique aqui

O que é?

O **PAP2T Linksys Adaptador Voip Desbloqueado** com 2 portas <u>FXS</u>, permite alta qualidade do serviço <u>VoIP</u> através de sua conexão com Internet banda larga. Basta conectar em seu roteador doméstico ou gateway e usar as duas portas de comunicação para conectar telefones analógicos ou máquinas de fax.

Cada porta do **PAP2T Linksys Adaptador** <u>Voip</u> **Desbloqueado** opera independentemente com serviço de telefone separado.

Com o **PAP2T Linksys Adaptador Voip Desbloqueado** você vai ter uma recepção clara e conexões de fax confiáveis, mesmo utilizando a Internet. Com a telefonia IP você pode contar com baixas tarifas de telefone nacional e internacional.

O **PAP2T Linksys Adaptador** <u>Voip</u> **Desbloqueado possui um** Dial Plan acoplado que permite criar atalhos para discagem mais rápida.

Pode-se adicionar um número de telefone virtual para atender em qualquer lugar do mundo. Você pode adicionar até o número de sua central **PBXIP**.

PAP2T Linksys Adaptador Voip Desbloqueado é compatível com todos os outros recursos de telefones especiais que estão disponíveis a partir de seu provedor de serviços de Internet e telefone.

É compatível com os serviços de identificador de chamadas, chamada em espera, correio de voz, encaminhamento de chamada, toque diferenciado, e muito mais.

Vamos para configuração

1º Passo – Criação dos ramais:

Criaremos dentro do servidor Issabel, os 2 ramais que se registrarão ao ATA FXS. Cada ramal refere-se a cada porta do PAP2T.

No Issabel em: **PBX → PBX CONFIGURATION → Basic → EXTENSIONS**

- (Clique em Submit) para criação do seu ramal SIP.
- (User Extension) Dê um nome para seu ramal SIP.
- (Display name) Refere-se ao nome que aparecerá quando for efetuada alguma ligação do seu ramal SIP.
- (Secret) Crie uma senha de registro para o ramal SIP.

2º Passo – Acessando o Ata PAP2T:

Com o cabo de rede conectado na porta "**INTERNET**", digite no telefone que está inserido na porta "**PHONE**" o seguinte comando: **** **110** #, dessa forma você saberá o IP DHCP do seu equipamento.

Lojamundi – CNPJ: 17.869.444/0001-60

Av. Brasília, 451 – Formosinha, Formosa – GO, Cep 73813-010

Na interface web clique em "Admin Login" e "advanced", respectivamente.

3º Passo – Inserido IP estático no equipamento:

Em -> System

- DCP: deixe "No".
- Static IP: digite o IP de sua rede.
- Gateway: digite o servidor de internet de sua rede.
- NetMask: digite a mascara de rede.

Por fim, salve, para que as aplicações sejam validadas.

4º Passo – Registrando o ata PAP2T no servidor Isaabel:

Em → Line 1

Neste passo iremos inserir no ata o ramal SIP, que foi criado em nosso servidor Issabel. Realizaremos o registro em "Line 1" que refere-se a porta "PHONE1"

- Proxy: digite o IP do Issabel.
- Display name: digite o nome que aparecerá na tela.
- Password: digite a senha do seu ramal SIP.
- Auth ID: digite o nome ou número do ramal SIP.
- User ID: digite o nome ou número do ramal SIP.

Audio Configuration				

Pronto! Agora é verificar em "Info" se o seu ata se registrou no servidor Issabel:

	External IP:			
Line 1 Status				
	Display Name: Hook State: Last Registration At: Message Waiting: Last Called Number:	Camila Secretária Off 5/29/2018 05:36:22 No	User ID: Registration State: Next Registration In: Call Back Active: Last Caller Number:	100 Online 3568 s No
			1 1	

Bônus:

RESETANDO: Digite no telefone **** 73738 # 1# e será resetado.

IP DHCP – para ouvir digite **** 110 #

Tudo Pronto! Até o próximo tutorial.
